

How to get periods when late

If periods are delayed, several natural methods may help regulate the menstrual cycle. However, it's essential to address the underlying cause (hormonal imbalance, stress, PCOS, thyroid issues, etc.) before proceeding.

Dietary Methods

1. Papaya

- Raw papaya contains carotene, which stimulates estrogen production and helps induce periods.
- How to Use: Have a bowl of raw papaya or drink papaya juice once daily for a few days.

2. Pineapple

- Rich in bromelain, pineapple helps soften the uterus lining, promoting periods.
- How to Use: Eat fresh pineapple or blend it into a smoothie.

3. Sesame Seeds (Til)

- Sesame seeds promote uterine contractions.
- How to Use: Dry roast sesame seeds and mix with jaggery. Consume 1 teaspoon daily.

4. Fenugreek Seeds (Methi)

- Fenugreek seeds can help balance hormones.
- How to Use: Boil 1 teaspoon of seeds in water and drink it warm twice daily.

5. Ginger and Honey

- Ginger increases body heat and promotes menstrual flow.
- How to Use: Boil grated ginger in water and add honey. Drink warm twice daily.

6. Turmeric Milk

- Turmeric is a natural emmenagogue (stimulates blood flow in the pelvic region).
- How to Use: Add 1/2 teaspoon of turmeric to warm milk. Drink it before bedtime.

7. Parsley Tea

- Parsley contains myristicin and apiol, which may help induce periods.
- How to Use: Boil parsley leaves in water, strain, and drink 2 cups daily.

8. Cinnamon Tea

- Cinnamon promotes blood flow and warms the body.
- How to Use: Add cinnamon powder to hot water or milk and drink once a day.

9. Asafoetida (Hing)

- Asafoetida is known to balance hormones and stimulate periods.
- How to Use: Add a pinch of hing to warm water or food.

10. Aloe Vera Juice

- Aloe vera can regulate hormones responsible for menstruation.
- How to Use: Extract fresh aloe vera gel, mix with honey, and consume on an empty stomach.

Lifestyle Changes

1. Reduce Stress

- High stress can delay periods by disrupting hormonal balance with deep breathing exercises.

2. Exercise Moderately

- Light exercise like walking or yoga can stimulate menstrual flow. Avoid over-exercising, as it can worsen delays.

3. Maintain Healthy Weight

- Sudden weight gain or loss can impact your cycle. Eat a balanced diet to maintain a healthy weight.

4. Hydration

- Drink 2.5 -3 litres of water to keep your body hydrated and support overall hormonal balance.

Supplements

1. Vitamin C

- High doses of Vitamin C increase estrogen production and induce menstruation.
- Sources: Oranges, lemons, strawberries, kiwis, or Vitamin C tablets (consult your doctor before using high doses).

2. Evening Primrose Oil

- Helps regulate hormonal imbalances.

3. Iron and Folate

- To manage anemia-induced delays, ensure sufficient iron and folate intake.
