

Angular 20 CRUD Application (Module-Based) with JSON Server

Step 1: Create Angular Project (Module-Based)
ng new angular20-crud-app --no-standalone
cd angular20-crud-app
ng serve

Step 2: Install JSON Server
npm install json-server --save-dev

Create db.json:

```
{
  "products": [
    { "id": 1, "name": "Laptop", "price": 50000 },
    { "id": 2, "name": "Mobile", "price": 20000 }
  ]
}
```

Add script in package.json:

```
"json-server": "json-server --watch db.json --port 3000"
```

Run backend:
npm run json-server

API URL:
http://localhost:3000/products

Step 3: Import HttpClientModule in app.module.ts

Step 4: Generate Feature Module

```
ng generate module features/products --module app
ng generate component features/products/product-list
ng generate component features/products/product-form
ng generate service features/products/product
```

Step 5: Configure Lazy Loading in app-routing.module.ts

Step 6: Implement CRUD operations in ProductService:

- getAll()
- getById(id)
- create(product)
- update(id, product)
- delete(id)

Step 7: Build Product List Component

- Display data using *ngFor
- Add Edit & Delete buttons

Step 8: Build Product Form Component

- Use Reactive Forms
- Handle Add and Edit logic
- Navigate back after save

Features Covered:

- Angular 20 (Module-Based)
- Feature Modules
- Lazy Loading
- Routing
- Reactive Forms
- CRUD Operations
- JSON Server Integration
- REST API Communication
