

Angular 20 + PrimeNG (Module-Based) Setup Guide

1. Create Angular Module-Based Project

- Run command: `ng new angular-primeng-app --standalone=false --routing=true --style=css`
- Navigate to project folder: `cd angular-primeng-app`
- Run application: `ng serve`

2. Install Required Packages

- `npm install primeng@20 primeicons @primeng/themes`
- `npm install @angular/cdk@20`

3. Configure Styles

- Open `src/styles.css`
- Add: `@import "primeicons/primeicons.css";`
- Do NOT import node_modules paths like older PrimeNG versions

4. Enable Animations (Angular 20 Way)

- Open `app.module.ts`
- Import: `provideAnimations` from `@angular/platform-browser/animations`
- Add to providers: `provideAnimations()`

5. Example `app.module.ts` Configuration

- Import `BrowserModule`, `FormsModule`
- Import PrimeNG modules like `ButtonModule`, `SelectModule`, `TableModule`
- Add `provideAnimations()` in providers

6. Example PrimeNG Component

- Import `ButtonModule` from `primeng/button`
- Add in HTML

7. Run Application

- Stop server if running (Ctrl+C)
- Run again: `ng serve`

- Open <http://localhost:4200>

8. Common PrimeNG Modules Used

- ButtonModule
- SelectModule
- TableModule
- DialogModule
- InputTextModule
- ToastModule
- ToolbarModule
