As per ADA Guideline: Fasting Plasma Glucose (FPG)	
Normal	70 to 100 mg/dl
Prediabetes	100 mg/dl to 125 mg/dl
Diabetes	126 mg/dl or higher

Note :

The assay could be affected mildly and may result in anomalous values if serum samples have heterophilic antibodies, hemolyzed, icteric or lipemic. The concentration of Glucose in a given specimen may vary due to differences in assay methods, calibration and reagent specificity. For diagnostic purposes results should always be assessed in conjunction with patients medical history, clinical findings and other findings.

*Note - Mentzer index (MI), RDW-CV and RDWI are hematological indices to differentiate between Iron Deficiency Anemia (IDA) and Beta Thalassemia Trait (BTT). MI >13, RDWI >220 and RDW-CV >14 more likely to be IDA. MI <13, RDWI <220, and RDW-CV <14 more likely to be BTT. Suggested Clinical correlation. BTT to be confirmed with HB electrophoresis if clinically indicated.

CARCINO EMBRYONIC ANTIGEN (CEA) Bio. Ref. Interval. :-	E.C.L.I.A	3.67	ng/mL

Non Smokers (Past / Never Smoked) - <5
Smokers (current) - <6.5

Clinical Significance:

- CEA is often used to monitor patients with cancers of the gastrointestinal tract (GI). Increased CEA levels can indicate some Non-Cancer related conditions, Such as some forms of inflammation, Cirrhosis, and Peptic Ulcer. Also, Smokers tend to have Higher CEA levels than Non-Smokers.
When cancer spreads to other organs, CEA levels rise and may be present in other types of bodily fluids besides blood.
- Samples should not be taken from patients receiving therapy with high biotin doses (i.e >5 mg/day) until atleast 8 hrs following the last biotin administration, as this may interfere with the result.
- In few cases, interference due to extremely high titres of antibodies to analyte - specific antibodies, streptavidin or ruthenium can occur.
- For Diagnostic Purpose, Results should always be assessed in Conjunction with the patients medical history, clinical examination and other findings.

TEST NAME	TECHNOLOGY	VALUE	UNITS
25-OH VITAMIN D (TOTAL)	E.C.L.I.A	20.2	ng/mL

Bio. Ref. Interval. :

Deficiency : ≤ 20 ng/ml || Insufficiency : 21-29 ng/ml

Sufficiency : ≥ 30 ng/ml || Toxicity : > 100 ng/ml

Clinical Significance:

Vitamin D is a fat soluble vitamin that has been known to help the body absorb and retain calcium and phosphorous; both are critical for building bone health.

Decrease in vitamin D total levels indicate inadequate exposure of sunlight, dietary deficiency, nephrotic syndrome.

Increase in vitamin D total levels indicate Vitamin D intoxication.

Specifications: Precision: Intra assay (%CV):9.20%, Inter assay (%CV):8.50%

Kit Validation Reference : Holick M. Vitamin D the underappreciated D-Lightful hormone that is important for Skeletal and cellular health Curr Opin Endocrinol Diabetes 2002;9(1)87-98.

VITAMIN B-12	E.C.L.I.A	< 100	pg/mL
--------------	-----------	-------	-------

Bio. Ref. Interval. :

Normal: 197-771 pg/ml

Clinical significance :

Vitamin B12 or cyanocobalamin, is a complex corrinoid compound found exclusively from animal dietary sources, such as meat, eggs and milk. It is critical in normal DNA synthesis, which in turn affects erythrocyte maturation and in the formation of myelin sheath. Vitamin-B12 is used to find out neurological abnormalities and impaired DNA synthesis associated with macrocytic anemias. For diagnostic purpose, results should always be assessed in conjunction with the patients medical history, clinical examination and other findings.

Specifications: Intra assay (%CV):2.6%, Inter assay (%CV):2.3 %

TEST NAME	TECHNOLOGY	VALUE	UNITS
TROPONIN I HEART ATTACK RISK Bio. Ref. Interval. :-	C.M.I.A	2.02	pg/mL

Cutoff values (Precision at 99th percentile) : Male : ≤ 26.2 || Female : ≤ 15.6

Clinical Significance:

The Cardiac Troponin I is cardiac specific and highly sensitive marker for myocardial damage. In acute myocardial damage the Troponin I values are raised 4-6 hrs after cardiac symptom onset and may remain elevated for a period of 7-12 days of cardiac injury. It is an independent risk marker that can predict near, mid and long term outcome in patients with Acute coronary syndrome. A single Troponin I result may not be sufficient to evaluate MI. Serial Blood draws are recommended to evaluate Acute coronary syndrome (ACS) patients. Increased levels of Cardiac troponin I can be seen in Myocarditis, heart contusion, cardiomyopathy, congestive heart failure, interventional therapy like cardiac surgery and drug induced cardiomyopathy. Any condition resulting in myocardial injury can potentially increase Troponin I levels.

Hence The results should always be used in conjunction with ECG changes, Clinical symptoms, other findings etc. to Diagnose MI. The various interfering factors / limitations of the Troponin I assay are - presence of heterophile antibodies, Patients on Human anti mouse monoclonal antibody (HAMA) therapy, Rheumatoid factor (RF), high total protein levels etc. The Coronary vascular disease risk stratification in Asymptomatic patients is as given in the below table, which can be suggested for preventive clinical management in conjunction with other clinical findings, investigations and clinical symptoms.

The following cut-off points may be used to aid in stratifying the risk of cardiovascular disease in asymptomatic individuals.

HIGH SENSITIVE TROPONIN-I LEVEL		
MALE	FEMALE	INTERPRETATION
<6	<4	Low risk of future heart attack
≥ 6 to ≤ 12	≥ 4 to ≤ 10	Moderate risk of future heart attack
>12	>10	Elevated risk of future heart attack

Specifications: Precision at the 99th Percentiles

Females = 15.6 pg/mL -5.3% CV || Males = 34.2pg/mL - 3.5% CV

Clinical Significance:

Determination of LPA may be useful to guide management of individuals with a family history of CHD or with existing disease. The levels of LPA in the blood depends on genetic factors; The range of variation in a population is relatively large and hence for diagnostic purpose, results should always be assessed in conjunction with the patient's medical history, clinical examination and other findings.

CHLORIDE Bio. Ref. Interval. : ADULTS: 98-107 MMOL/L	I.S.E - INDIRECT	101.71	mmol/L

Clinical Significance :

An increased level of blood chloride (called hyperchloremia) usually indicates dehydration, but can also occur with other problems that cause high blood sodium, such as Cushing syndrome or kidney disease. Hyperchloremia also occurs when too much base is lost from the body (producing metabolic acidosis) or when a person hyperventilates (causing respiratory alkalosis). A decreased level of blood chloride (called hypochloremia) occurs with any disorder that causes low blood sodium. Hypochloremia also occurs with congestive heart failure, prolonged vomiting or gastric suction, Addison disease, emphysema or other chronic lung diseases (causing respiratory acidosis), and with loss of acid from the body (called metabolic alkalosis).

EST. GLOMERULAR FILTRATION RATE (eGFR) Bio. Ref. Interval. :-	CALCULATED	59	mL/min/1.73 m2

> = 90 : Normal
60 - 89 : Mild Decrease
45 - 59 : Mild to Moderate Decrease
30 - 44 : Moderate to Severe Decrease
15 - 29 : Severe Decrease
<15 : Kidney Failure

Clinical Significance

The normal serum creatinine reference interval does not necessarily reflect a normal GFR for a patient. Because mild and moderate kidney injury is poorly inferred from serum creatinine alone. Thus, it is recommended for clinical laboratories to routinely estimate glomerular filtration rate (eGFR), a "gold standard" measurement for assessment of renal function, and report the value when serum creatinine is measured for patients 18 and older, when appropriate and feasible. It cannot be measured easily in clinical practice, instead, GFR is estimated from equations using serum creatinine, age, race and sex. This provides easy to interpret information for the doctor and patient on the degree of renal impairment since it approximately equates to the percentage of kidney function remaining. Application of CKD-EPI equation together with the other diagnostic tools in renal medicine will further improve the detection and management of patients with CKD.
