

MobilePASS+ Self-Enrollment Guide

SafeNet MobilePASS+ App

The SafeNet MobilePASS+ app turns your mobile phone into a two-factor authentication device, removing the need to carry an additional hardware token.

As a SafeNet MobilePASS+ user, you can generate passcodes on your mobile device, and use those passcodes to authenticate to protected corporate and web-based applications.

Supported Platforms

SafeNet MobilePASS+ supports all Android, iOS and Windows versions.

Enrolling a SafeNet MobilePASS+ Token

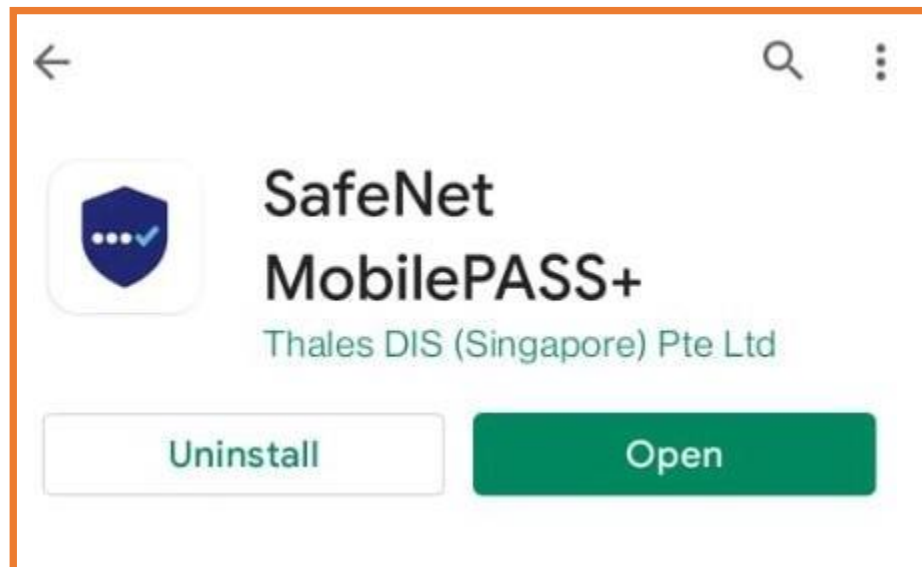

Before you can use SafeNet MobilePASS+ to generate passcodes, you must enroll a SafeNet MobilePASS+ token on your device using one of the following methods:

Automatic Enrollment – Automatically copy and paste the activation code into the Auto Enrollment window by clicking the Enroll your SafeNet MobilePASS+ token link on the notification email.

QR Code Enrollment – Scan a QR code to enroll your SafeNet MobilePASS+ token. This is recommended when you cannot receive email or open self-enrollment from your device.

Step-1:

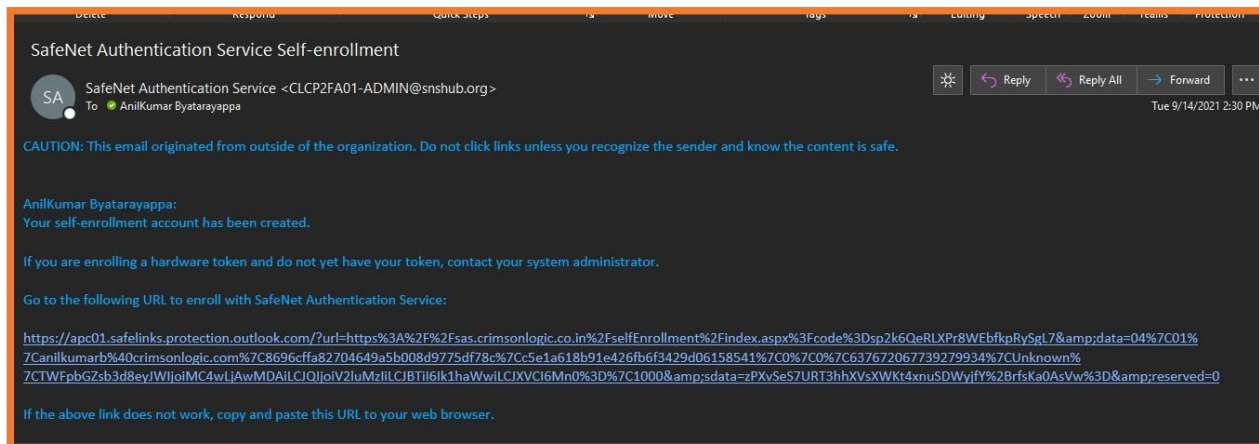

Install the “**SafeNet MobilePASS+**” app from Google Play Store for Android and from App Store for iPhone Users.

Step-2:

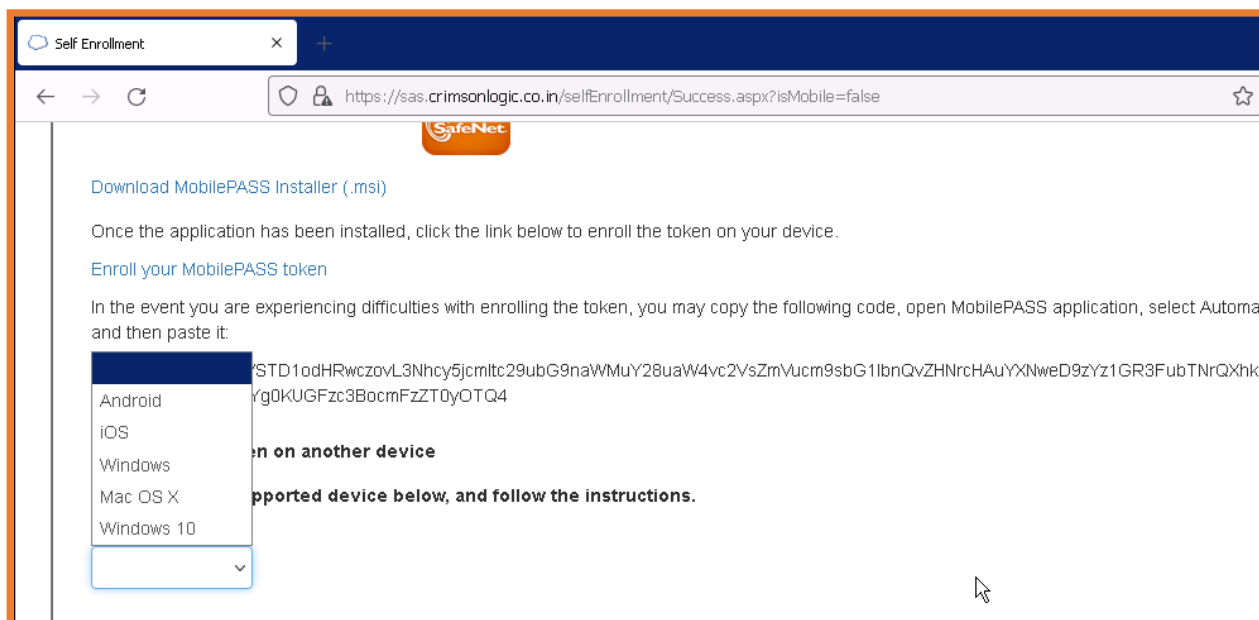

After installing the App and Upon the request from user with proper approval Infra team will provision the VPN access for the staff.

After the provision user will get an email from "SafeNet Authentication Service <CLCP2FA01-ADMIN@snsnub.org>" as shown below.

Step-3:

After you open the link which sent in the Self-Enrollment email you can see the below option. Please select the type of mobile like Android/IOS/Windows.

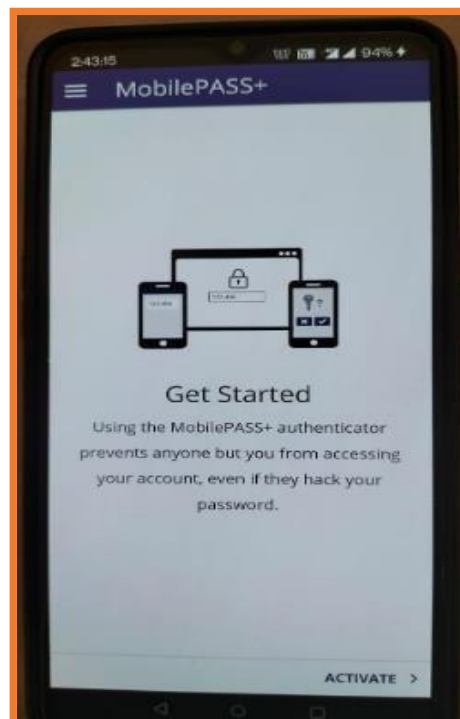

Step-4:

After you select the type of mobile phone it will generate the QR code to scan and register the mobile app.

Step-5:

Open the MobilePASS+ app in the mobile and press on Activate.

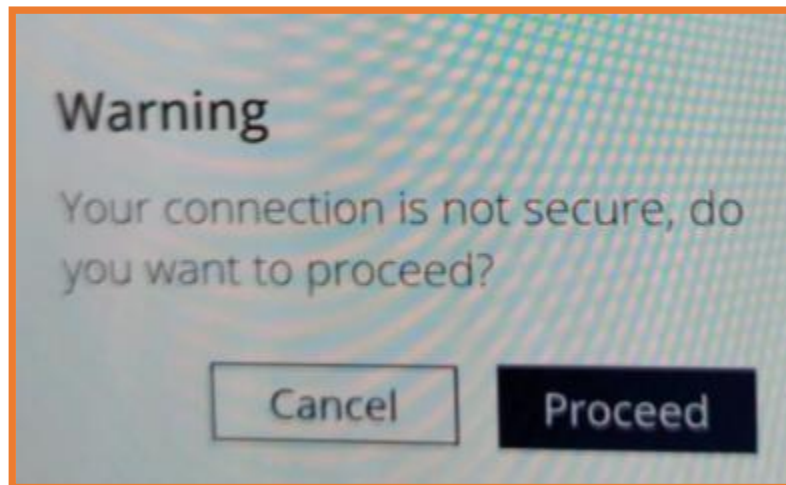

Step-6:

Scan the QR code which is generated after you select the mobile type.

Step-7:

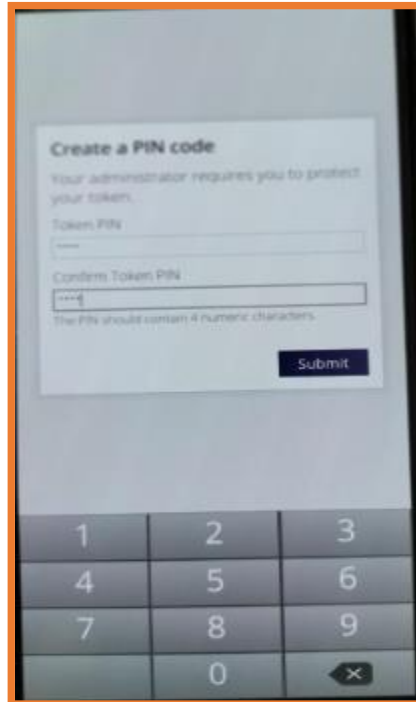

After you scan the QR code it will give the certificate warning and you need to click on Proceed.

Step-8:

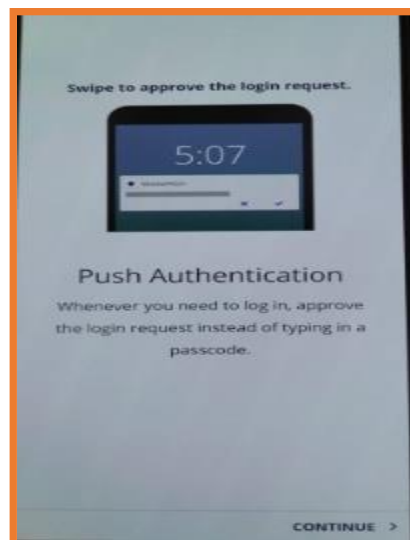

MobilePASS+ will prompt you to set the security PIN number which is required to open the App to generate the 2FA PIN.

Security PIN is a 4-digit PIN number. Please note you remember the PIN number and if there are 3 wrong PIN entries your enrolled token will be automatically deleted.

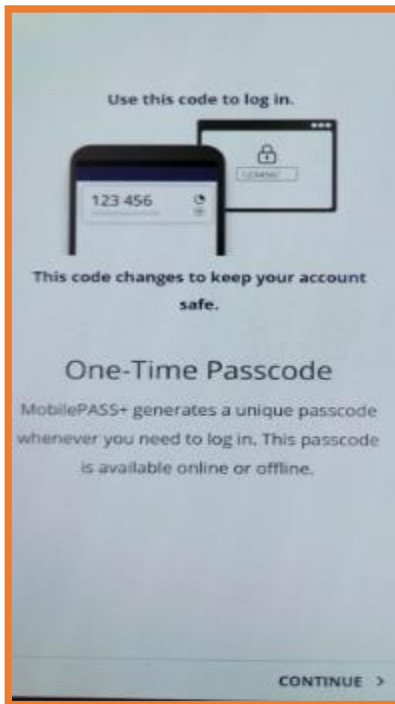

Step-9:

MobilePASS+ will prompt you to set the Push Notification. No change to be done here and just click on Continue.

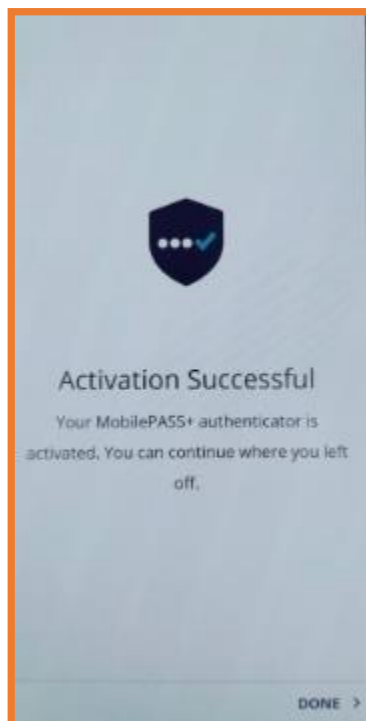

Step-10:

Just click on Continue without any changes in this screen.

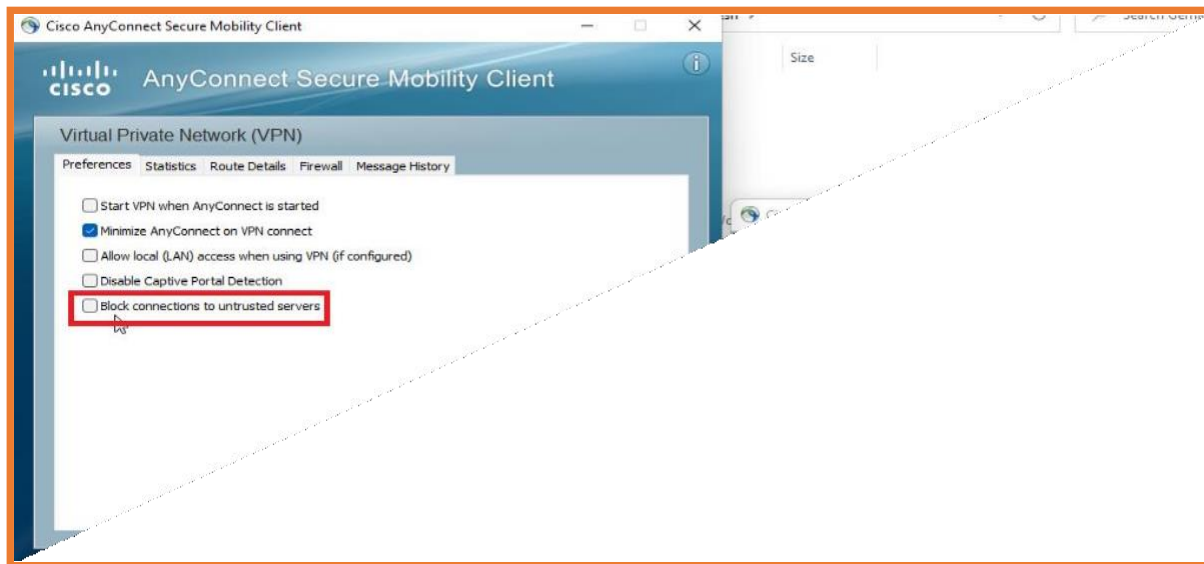

Step-11:

Finally, you reached the successful self-enrollment.

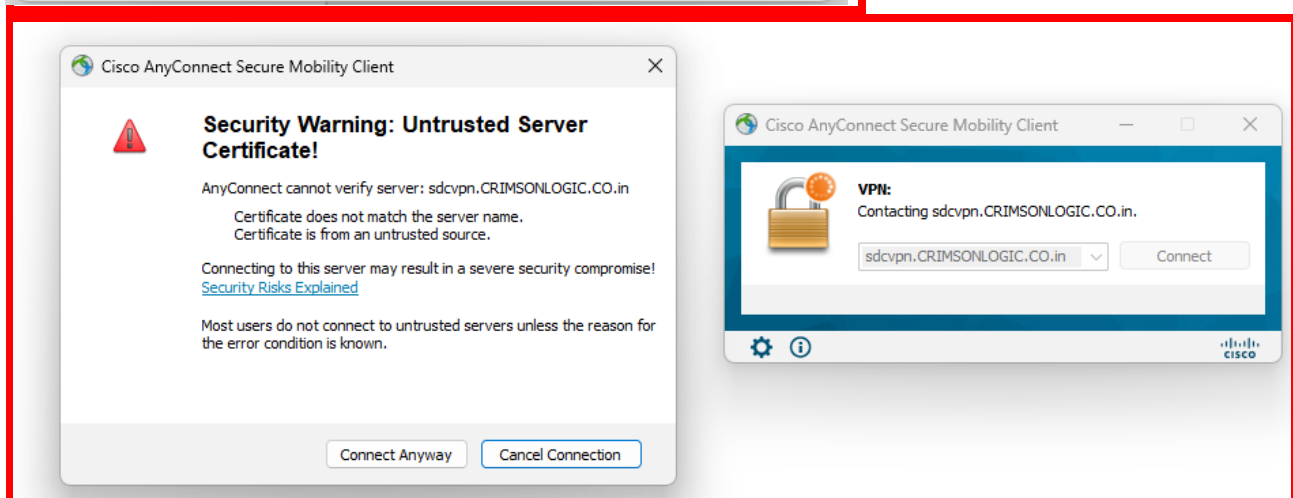

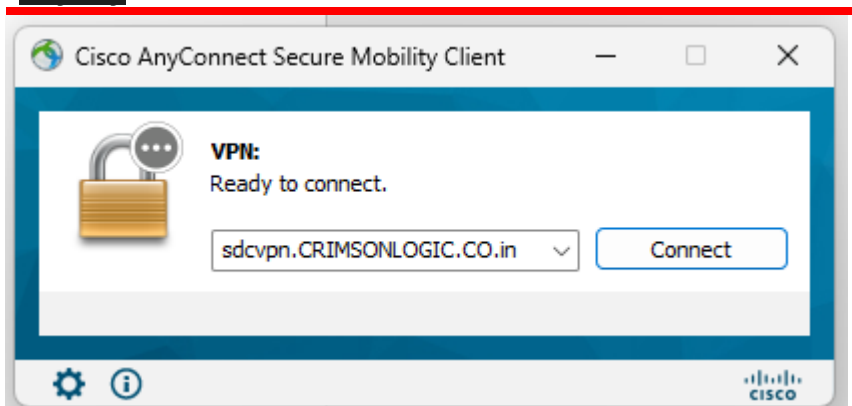

Step-12:

After the successful enrollment open the Cisco AnyConnect VPN client in the laptop and click on the settings icon on the VPN client and **Uncheck** the option **Block Connections to untrusted servers**. Then close the Settings window.

Step-13:

After that enter the VPN Server as **sdcvpn.crimsonlogic.co.in** in the AnyConnect VPN client and click on connect. When it prompts for Certificate error, please click on **Connect Anyway**.

STEP-14:

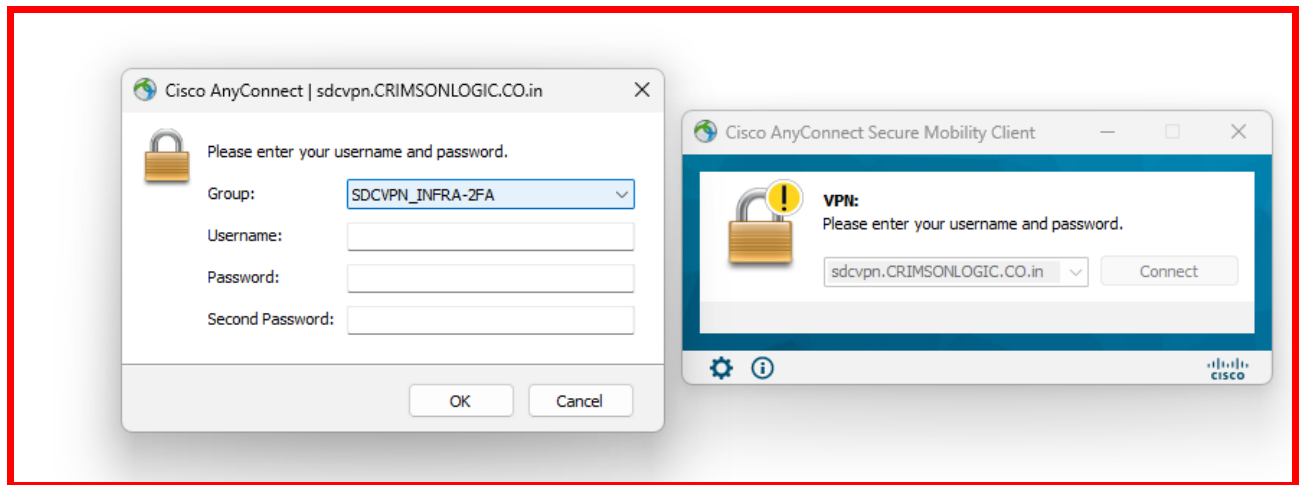

Next when it Prompts for Authentication and group selection, select the correct group you requested and got the VPN access from the Group drop-down menu.

Username: Your Laptop/Outlook User Name (without @crimsonlogic.com)

Password: Outlook Password

Second Password: 6 Digit PIN form the MobilePass+ app where you enrolled using the Self Enrollment.

After providing the details, please click on OK to successfully connect to the VPN.

After the successful activation is completed, please follow the same process as you are following previously to connect the SDC Remote VPN. Instead of using the PIN from the hardware token, please user the PIN which is generate from the MobilePASS+.

For any issues, please contact **\$SDC-MIS Infra <SDC-MIS-Infra@crimsonlogic.com>.**
