Follow up Advice :

Follow up with reports

Case of AUB with morbid obesity

USG Uterus - Size: 9.5 x 5.5 x 6.3 cm. Bulky in size and shows heterogenous myometrial echoes. Posterior wall intramural fibroid is noted measuring 3.4 x 3.1 cm. Endometrial thickness: 11.9 mm. Endometrial cavity: Diffusely thickened.

UPT negative on 6/12/25

S TSH - 9.1

Hb - 13.4

Plt - 4.66

P/A -Soft obese abd wall

P/S - bleeding ++ , cervix appears normal

P/V - uterus size not made out

Bleeding not reduced with Tab Pause 500 mg 1-0-1

Advise

Plan - Therapeutic D AND C and endometrial tissue biopsy on 10/12/25

Pre anesthetic check up 3 rd floor

HIV , HBSAG , HCV

PT APTT INR

Renal function test

Hb1c , Blood group

Reserve 1 PRBC

Tab Meprate 10 mg 1-0-1 after food

Admission tomorrow morning

Anaesthesia Note :

PAC

Sx :Therapeutic D AND C and endometrial tissue biopsy

## Advice :

NPO for 6 hours for solids and 2 hours for water

THYROID MEDICATIONS medications to be taken on day of surgery at 5 am with sips of water

Do GRBS in the morning of surgery ; Physician opinion if GRBS &gt; 200 mg/dl

Kindly do COAG PROF, KFT, FREE T3/FREE T4/ Serology

Kindly do ECG , ECHO

Kindly get Pulmonology/Endocrinology opinion I/v/o FITNESS FOR SURGERY

Reserve 1 pRBC on admission

Nebulisations Before shifting

Shall review

| Test Method:                        | Chemiluminescent Microparticle Immunoassay. |      |                               |
| Test Result                         | REACTIVE                                    |      |                               |

**Technical Note:**

Hepatitis B virus infection is acquired through blood and blood products and maternal-neonatal transmission. HBSAg is the first serological marker of acute infection. HBV infection appearing 2-4 weeks after infection and becomes serologically undetected by ELISA within a few weeks to few months. Persistence HBSAg beyond 6 months indicates chronic HBV infection.

Method : Chemiluminescent Microparticle immunoassay (CMIA)  
 (ABBOTT ARCHITECT KIT) REACTIVE

S/CO values are 4.66, 4.88 & 4.73 in the 1st and duplicate runs respectively  
 S/CO values are 4.69, 4.66 & 4.38 in the 2nd and duplicate runs respectively

Reference Range for HBSAg test by Architect CMIA method :  
 Non Reactive : S/CO value <1.00  
 Reactive : S/CO  $\geq$  1.0.

Comment : The above mentioned test is a screening test. All HBSAg CMIA Reactive cases should be further evaluated by HBSAg neutralization assay and /HBV DNA PCR for confirmation.

Value informed to Dr. Naveen and Dr. Swathi by Arun at 18:25

| Acquired Immunodeficiency syndrome (AIDS) is a disease caused by Human Immuno Deficiency Virus (HIV 1 and HIV 2). This test is a qualitative detection of antibodies to Human Immunodeficiency Virus types 1, including group M and O, and/or 2 (anti-HIV-1 and anti-HIV-2) and HIV p24 antigen. A non-reactive result does not preclude the possibility of infection with HIV. False positive results may be seen in autoimmune diseases, alcoholic hepatitis, primary biliary cirrhosis, leprosy and multiple pregnancies. The test may be non-reactive during the window period and end stage of the disease. |                                            |      |                               |

This report is based on the specimen/s received. The report may need to be correlated clinically as laboratory investigations are dependent on multiple variables. These results should not be reproduced in part.

| Test Result:                                       | Non-Reactive                                |      |                               |

Technical Note:

Antibodies to hepatitis C virus appear after variable periods of time in different patients.  
Other tests like recombinant immunoblot assay and PCR may be used for confirmation of results.

Method: ISE Indirect

Technical Note

eGFR which is primarily based on Serum Creatinine is a derivation of CKD-EPI 2009 equation normalized to 1.73 sq.m BSA and is not applicable to individuals below 18 years. eGFR tends to be less accurate when Serum Creatinine estimation is indeterminate e.g. patients at extremes of muscle mass, on unusual diets etc. and samples with severe Hemolysis/ Icterus / Lipemia.

Method: ISE Indirect

Technical Note

eGFR which is primarily based on Serum Creatinine is a derivation of CKD-EPI 2009 equation normalized to 1.73 sq.m BSA and is not applicable to individuals below 18 years. eGFR tends to be less accurate when Serum Creatinine estimation is indeterminate e.g. patients at extremes of muscle mass, on unusual diets etc. and samples with severe Hemolysis/ Icterus / Lipemia.

This report is based on the specimen/s received. The report may need to be correlated clinically as laboratory investigations are dependent on multiple variables. These results should not be reproduced in part.

Clinical Laboratory Report

HAEMATOLOGY

| TEST                                             | RESULT | UNIT                     | BIOLOGICAL REFERENCE INTERVAL |
|--------------------------------------------------|--------|--------------------------|-------------------------------|
| COMPLETE BLOOD COUNT (Automated)                 |        | Specimen-EDTA Blood      |                               |
| WBC COUNT(TC)(Coulter principle)                 | 8.0    | $\times 10^3$ cells/cumm | [4.0-11.0]                    |
| RBC Count (Electrical impedance)                 | 4.07   | million/cu.mm            | [3.80-4.80]                   |
| Haemoglobin (Photometric method)                 | 12.4   | g/dl                     | [12.0-15.0]                   |
| Haematocrit (Calculated)                         | 37.0   | %                        | [36.0-46.0]                   |
| MCV (Calculated)                                 | 91.0   | fl                       | [83.0-101.0]                  |
| MCH (Calculated)                                 | 30.4   | pg                       | [27.0-32.0]                   |
| MCHC (Calculated)                                | 33.4   | g/dl                     | [31.5-34.5]                   |
| Platelet count                                   | 397    | $\times 10^3$ cells/cumm | [150-450]                     |
| RDW (CV) (Calculated)                            | 13.6   | %                        | [11.6-14.0]                   |
| DIFFERENTIAL COUNT (VCS technology & Microscopy) |        |                          |                               |
| Neutrophils                                      | 64.3   | %                        | [40.0-70.0]                   |
| Lymphocytes                                      | 24.3   | %                        | [20.0-45.0]                   |
| Monocytes                                        | 7.6    | %                        | [2.0-13.0]                    |
| Eosinophils                                      | 3.5    | %                        | [1.0-6.0]                     |
| Basophils                                        | 0.3    | %                        | [0.0-2.0]                     |
| Absolute Neutrophilic Count                      | 5.1    | $\times 10^3$ cells/cumm | [2.0-7.0]                     |
| Absolute Lymphocyte Count                        | 1.9    | $\times 10^3$ cells/cumm | [1.0-3.0]                     |
| Absolute Monocyte Count                          | 0.61   | $\times 10^3$ cells/cumm | [0.20-1.00]                   |
| Absolute Eosinophil Count                        | 0.28   | $\times 10^3$ cells/cumm | [0.02-0.50]                   |
| Absolute Basophil Count                          | 0.02   | $\times 10^3$ cells/cumm | [0.02-0.10]                   |

**BLOOD BANK**

**Clinical Laboratory Report**

| TEST | RESULT | UNIT | BIOLOGICAL REFERENCE INTERVAL |
|------|--------|------|-------------------------------|
|------|--------|------|-------------------------------|

Blood Group & Rh Typing (Agglutination by gel/tube technique) Specimen-Blood

Blood Group & Rh typing O Rh(D) Positive

Technical note:

ABO grouping and Rh typing is done by cell and serum grouping by microplate / gel technique.

Technical Note:

ANTIBODY SCREENING Specimen-Serum

Cell Panel I NEGATIVE

Cell Panel II NEGATIVE

Cell Panel III NEGATIVE

Autocontrol NEGATIVE

Final Antibody Screen Result Negative

Technical Note

Antibody screening is done using a 3 cell panel of reagent red cells coated with Rh , Kell, Duffy, Kidd,Lewis,P, MNS, Lutheran and Xg antigens using gel card by microtyping techniques.
